EDUCATION

Georgia Institute of Technology

Master of Science – Computer Science

Expected Graduation: Fall 2028

Western Governors University

Bachelor of Science – Software Engineering

Fall 2025

TECHNICAL SKILLS

Languages: C#, JavaScript, Python, SQL, HTML, CSS

Libraries & Frameworks: .NET, ASP.NET Core, React, Node.js, Entity Framework Core, WinForms

Databases: MySQL, MongoDB, SQLite

Developer Tools: Git, GitLab, Docker, Postman, Linux, Bash

Cloud & Deployment: AWS, Azure, Vercel

EXPERIENCE

Fiserv – Software Engineering Intern

June 2026 – August 2026

Technology Summer Intern

- Maintained and enhanced an internal transaction simulation tool supporting validation of enterprise payment processing workflows using C#, WinForms, .NET, and MySQL
- Refactored the application by removing legacy SQLite-based caching, restructuring dependent components, and delivering production code through GitLab
- Resolved critical Fortify security findings—including SQL injection, registry manipulation, and ASP.NET Core vulnerabilities to improve application security and code quality

PROJECTS

Torus | React – ASP.NET Core – MySQL

3D Model Sharing Platform

- Developed with React 19, Three.js, and ASP.NET Core 8, featuring authenticated binary file streaming of .glb assets rendered interactively in the browser via React Three Fiber
- Built a secure RESTful API with 8+ endpoints, JWT-based authentication, and hashed password storage, serving a React frontend with 6 routes, client side search, and context driven route guarding
- Modeled relational data with Entity Framework Core and MySQL to manage users, model metadata, and ownership, supporting upload, deletion, profile editing, and report generation
- Deployed frontend, backend, and database services across Vercel, Azure, and AWS for distributed cloud hosting

Macchi | React

Developer Portfolio

- Built a responsive portfolio website with React 19 and Vite, featuring dynamic project pages populated via the GitHub REST API with repository language fetching
- Integrated a storage caching layer with a 3 day expiration policy and stale data fallback, ensuring the site renders reliably even under API rate limits or network failure
- Implemented a multi-theme system with CSS custom properties and animated transitions, persisted across sessions via localStorage, alongside React context-based state architecture

Aptt | .NET MAUI – SQLite

Academic Planning Mobile App

- Developed a cross-platform mobile application with .NET MAUI targeting Android, iOS, macOS, and Windows, featuring 9 pages with hierarchical navigation across academic terms, courses, and assessments
- Implemented SQLite-based local persistence with full CRUD operations, input validation, seed data on first launch, and a native share sheet integration for exporting course notes
- Scheduled local push notifications for course and assessment start/end dates, with entity toggle controls and persistent notification state
